The color wheel is a valuable tool for gardeners, but it can also be limiting. By sticking too closely to the wheel, you can end up with gardens that are safe and boring. But when you break free from the wheel, you open up a whole new world of possibilities.

In this guide, we'll show you how to jump off the color wheel and create stunning, harmonious gardens that will turn heads. We'll cover everything from choosing the right plants to creating eye-catching combinations.

## Why Jump Off the Color Wheel?

There are several reasons why you might want to jump off the color wheel when designing your garden.

- **To create more interesting and unique gardens.** When you stick to the color wheel, you're limited to a certain number of color combinations. But when you break free from the wheel, you can create gardens that are truly unique and personal.
- **To create more harmonious gardens.** The color wheel can be a helpful tool for creating harmonious color combinations. But it's important to remember that the wheel is just a starting point. By experimenting with different color combinations, you can create gardens that are even more harmonious and pleasing to the eye.
- **To create gardens that are more reflective of your personality.** The color wheel can be a helpful tool for choosing colors that you like. But it's important to remember that your garden should be a reflection of your own personal style. By jumping off the color wheel, you can create gardens that are truly unique and expressive.

## How to Jump Off the Color Wheel

Jumping off the color wheel doesn't mean that you have to abandon all sense of order. There are still some basic principles that you can follow to create harmonious and visually appealing gardens.

One of the most important things to keep in mind is the concept of **complementary colors**. Complementary colors are two colors that are opposite each other on the color wheel. When placed next to each other, they create a striking contrast that can be very eye-catching.

Another important concept to keep in mind is the concept of **analogous colors**. Analogous colors are two colors that are next to each other on the color wheel. When placed next to each other, they create a more subtle and harmonious effect.

You can also use the color wheel to create **triadic color schemes**. Triadic color schemes are based on three colors that are evenly spaced around the color wheel. This type of color scheme can be very striking and dramatic.

Once you have a basic understanding of color theory, you can start to experiment with different color combinations. Don't be afraid to break the rules and try something new. The best way to learn is by experimenting and seeing what works.

## **Choosing the Right Plants**

When choosing plants for your garden, it's important to consider both the color of the flowers and the color of the foliage. You want to choose plants that will complement each other and create a harmonious overall effect.

If you're not sure what colors to choose, you can start by looking at your favorite flowers. What colors do you find most appealing? Once you have a few colors in mind, you can start to look for plants that have those colors.

You can also use the color wheel to help you choose plants. For example, if you want to create a complementary color scheme, you can choose plants that have flowers that are opposite each other on the color wheel. Or, if you want to create an analogous color scheme, you can choose plants that have flowers that are next to each other on the color wheel.

## Creating Eye-Catching Combinations

Once you have chosen your plants, it's time to start creating eye-catching combinations. Here are a few tips:

- **Use contrasting colors.** Complementary colors can create a striking contrast that is very eye-catching. For example, you could plant red roses next to purple salvia.
- **Use analogous colors.** Analogous colors create a more subtle and harmonious effect. For example, you could plant pink roses next to lavender roses.
- **Use triadic color schemes.** Triadic color schemes can be very striking and dramatic. For example, you could plant red roses, yellow poppies, and blue delphiniums.
- **Use plants with different textures.** Plants with different textures can add interest and depth to your garden. For example, you could plant smooth-leaved roses next to fuzzy-leaved lamb's ear.
- **Use plants with different heights**
